## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7, 10-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crowe et al USPN 6,944,503. Crowe teaches a device for applying neural stimulation in an amount to produce stimulation (column 4 line 65-67). Although he does not explicitly teach determining the amount of charge, in his background section he notes that the amount of charge varies for different nerves and depends upon how the pulse is applied (column 4 lines 1-11). To have used his techniques to determine the amount of charge and the best application pulse would have been obvious.
